

PRODUCT ANNOUNCEMENT

Integrated Digital Systems/ScanAmerica, Inc. (IDS), has officially released its new PHR product “MedDocs PHR™”, a Secure Portable Patient Healthcare Record Application, and the MedSync™ option that will synchronize MedDocs PHR™ with secure health information networks, portals, and MedDocs™ EMR for compliant patient records management and back-up. Backup services will also be provided for a nominal fee at www.Healthedocs.com. The primary objective was to develop an affordable rugged, portable, zero foot print, open solution that would give patients control of their medical records and information as well as x-ray images and at the same time provide Healthcare providers the ability to share the data with their patients and update the data on MedDocs PHR™ through a simple drag and drop functionality. The MedDocs PHR™ application cost per client is under \$50.00, not including the hardware media which will vary with storage requirements based on patient needs and history. Whether you are just an everyday citizen, a reservist, a career military or retired individual MedDocs PHR™ provides the security and peace of mind that you have immediate access and control of your medical data and records.

MedDocs PHR™ can play an important role in healthcare reform, prevent errors, save lives and reduce healthcare cost. MedDocs PHR™ is a zero foot print application that runs presently on any encrypted, rugged USB flash drive ranging from 8-16GB, is completely stand-a-lone, and can provide various levels of encryption and biometric access security when using encrypted devices, in addition to ID and Password protection. Plans are in the works to provide special override access codes that have a period after which they expire to First Responders and Emergency Rooms through a toll free emergency line after they have presented credentials to an operator. MedDocs PHR™ not only stores and manages the patient’s critical medical data but also stores and provides the ability to view the patient’s data, charts, prescriptions, x-rays, film and other critical records, through the data, document and DICOM viewer built into MedDocs PHR™. MedDocs PHR™ provides eight (8) information tabs for patient data, patient records viewing, ICD-9 Code validation with updating capabilities, automatic look-up for spelling and selection when selecting the correct medication, condition and procedure, required data fields, and more. The patient medical data include data tabs for the following areas:

1. Patient Details
2. Insurance
3. Medications
4. Emergency Contacts
5. Healthcare Provider List
6. Medical Conditions
7. Patient Medical Records viewer
8. Immunizations /Allergy History

MedDocs PHR™ provides the patient and healthcare provider the ability to add and update records by merely dragging and dropping them on to the MedDocs PHR™ Graphical User Interface (GUI).

MedDocs PHR™ software is currently available with several secure, encrypted, rugged USB key configurations ranging from 4Gb to 16 GB storage capacity .

The Healthcare Group of IDS provides software, hosting, consulting and digitization of Patient Charts/Records and Medical Film as well as litigation support services, technical support, installation, maintenance, and third party product integration through it PhysicianTech Group (www.physiciantech.net).
