Product Announcement

Edge Enterprise™ out of the box provides built-in interfaces to popular workflow and web based collaboration products such as Microsoft's Sharepoint, EdgeVault™ and Xerox DocuShare™ and has its own concurrent web client interface. Edge Enterprise™ the best product for document capture, electronic records, business intelligence gathering, document management and provides a solution that is scalable from a single standalone desktop to an enterprise wide information management system. With the Edge Enterprise™ thin client Edge Enterprise™ information and documents can be shared throughout a company based on user ID and password or active directory services without duplicating information or documents. Abandoning the traditional WYSIWYG concept of design Edge Enterprise™ provides users the ability to individually customize each client with file specific metadata fields, data types and labels to meet their needs.

Edge Enterprise™ provides unlimited Data Sources (file cabinets) to be set-up in separate filing schema's to accommodate today's diverse and remote office environments. With Edge Enterprise™ you can literally manage an entire enterprise's documents with unlimited individual electronic file cabinets for each department or location with one product to install and manage.

Edge Enterprise™ comes complete with an SQL Express™ database, ready to run out of the box and with a simple click of your mouse your SQL Express data can be moved to Microsoft SQL latest full version. Standard reports and statistics can be produced using the Query and reporting capabilities or with MSSQL or the use of Crystal Reports. Edge Enterprise™ is a Microsoft tested application that manages the batch capture, scanning, classification, storage, archive, versioning and over 200 electronic document mime types including email and attachments. Edge Enterprise™ provides built-in interfaces to popular workflow and web based collaboration products such as Edge Workflow™, EMC iManage, Microsoft's Sharepoint, Xerox DocuShare™ and EdgeVault™.

It is critical today to be able to meet the business information management requirements of the many new regulations like HIPAA, Privacy Act of 1974, FOIA, Sarbanes Oxley Act and Consumer Privacy Protection Act of 2002 and more... to properly manage corporate communications, protect business and customer data and documents. Edge

Product Announcement

Enterprise™ security features provide compliance with all of the standards and requirements of these laws.

Edge Enterprise™ runs on Windows2000 Server/Professional, Windows 2003 & 2008 Server, Microsoft Vista and Windows XP Professional platforms and future releases. Edge Enterprise™ ships with a Microsoft SQL Express Database to keep it affordable and easy to manage, but also integrates with Microsoft SQL Server or any ODBC compliant database product. Also provided is compatibility with third party applications such as Crystal Reports for end-user developed reports, and the ability to use the Wizard to migrate information to SQL-based client-server products.

Edge Enterprise™ Web Interface

Edge Enterprise™ provides users secure local and remote access to their records without the need for a client application. The product resides on an IIS server and your database and the Image Directory can reside on the same server or a separate server. Edge Enterprise™ allows users to Add, Delete, Edit, View, and View Properties of the folders that they have permission to access. Documents can be Added, Deleted, and Emailed through the Edge Enterprise™ client based permissions. Folders and documents are protected by permissions. The owner of a folder or document can give individual or group permissions that allow only those specified users to view or edit the document.

Edge Enterprise™ web interface provides secure access to your records from anywhere by anyone with permissions based on a valid username and password stored within the Edge Enterprise™ Server or Active Directory.

Administrators will only have to update information once for each different client application configuration of Edge Enterprise™. Access is protected using an ID and Password in Edge Secure Admin, or Active Directory. Edge Enterprise provides for SSL and HTTPS encrypted access. RSA or USB Token security is available for dual authentication.

Edge Enterprise™ web interface is included with our Edge Enterprise™ Client/Server application. Since the thick and thin clients share the same database and image directory, all files and folders created or updated in one will be available in the other. Edge Enterprise™ logs all access and changes by user access ID and password.

Product Announcement

Pricing begins at \$1795.00 for base application with 5 Edge Workstation Licenses and 10 Concurrent Web Clients. Additional Workstation Licenses are \$295.00 and 5 additional Web Clients 395.00.
